

1. The circuit diagram shows a series circuit with a battery, a switch, and three resistors.

2. The battery is represented by a long vertical line (positive terminal) and a short, thick vertical line (negative terminal).

3. The switch is represented by a circle with a diagonal line through it, indicating it is open.

4. The three resistors are represented by rectangles with diagonal lines through them.

5. The current flows from the positive terminal of the battery, through the switch, and through the three resistors in series.
